Installation of Optimization Toolbox

You might have installed Optimization Toolbox already when installing Matlab. You can first check this from Apps sheet in Matlab. If the list (black rectangle in Figure 1) does not include option Optimization you can download and install it by first clicking "Get More Apps" (yellow rectangle in Figure 1). This opens a window like in Figure 2.

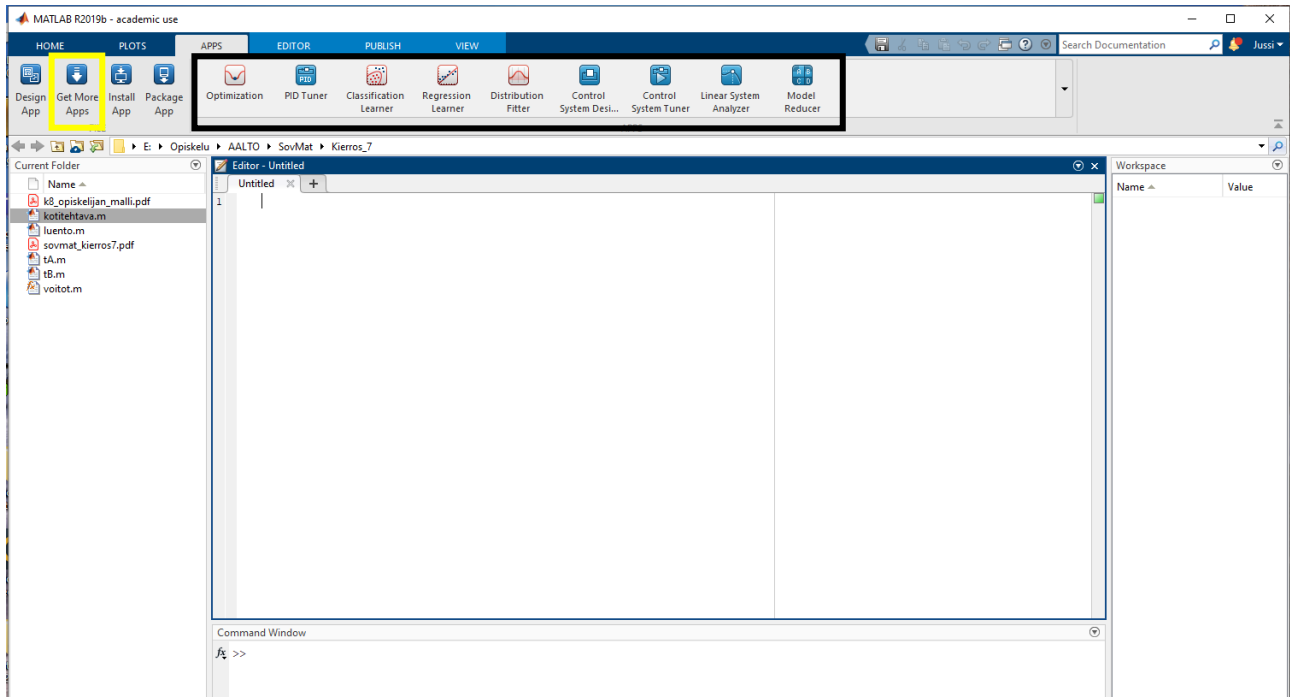

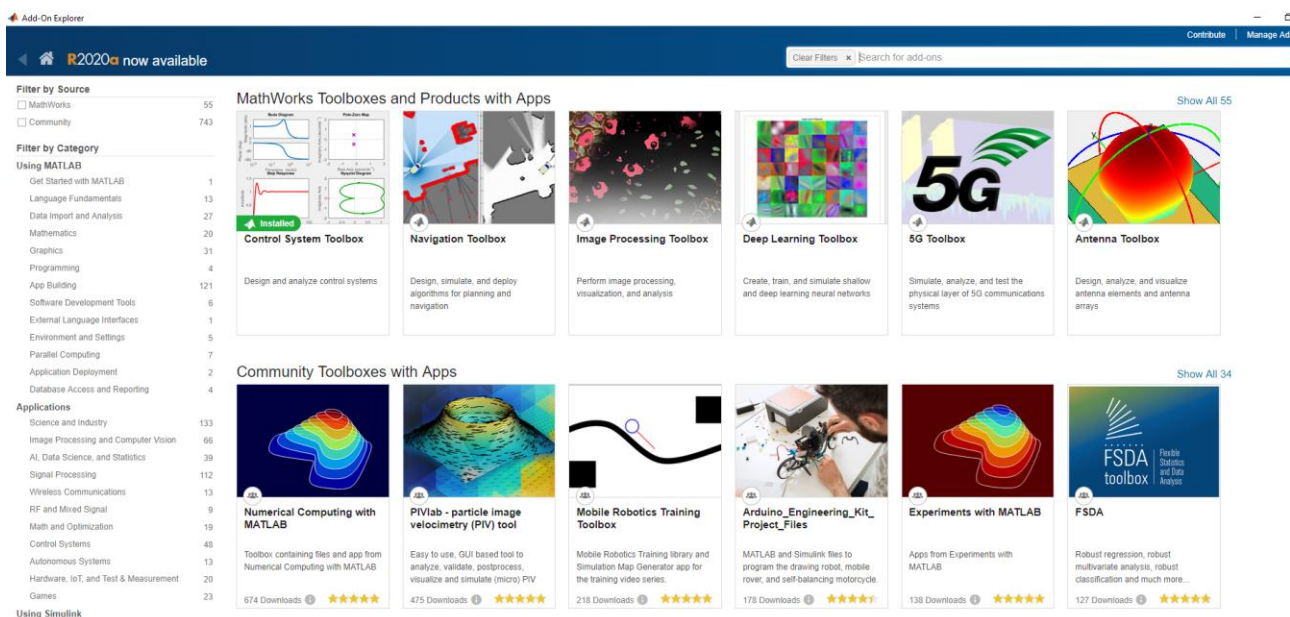

Figure 1: MatLAB

Figure 2: The window which opens after pressing "Get More Apps"

On top left there is a search field. Write "Optimization" and remove the option "Clear Filters" from search. Run the search and the one of the top results should be Optimization Toolbox (see Figure 3). Click it to open a window like in Figure 4. There you should see option install (this is not visible in Figure 4, as the toolbox is already installed). Run the installation.
